

EXPLONIX

*simultaneous detection/identification
of explosives and radiological traces
for expert's use*

**EXPLOSIVES TRACES
+
RADIOACTIVE COMPOUNDS
ALL-IN ONE**

The world's first device capable of one-second detection of all non-volatile plastic and other explosives together with continuous detection and identification of radioactive materials

» **EXPLONIX FEATURES**

- The world's first device capable of one-second detection of all non-volatile plastic and other explosives together with continuous detection and identification of radioactive materials
- Simultaneous, continuous detection and identification of all radioactive materials
- Infra-red Continuous Vapour Mode for reliable detection of all non-volatile/volatile explosives
- Extremely resistant against overload/saturation, no cleaning problems
- New Particulate mode with Needle Sampler for advanced sampling and reliable explosive identification
- Stand-alone automatic operation with full wireless remote control
- Detection and identification of all ICAO specified explosives (incl. TATP) even without taggants
- Immediate identification of "dirty bombs"
- Ready for remote robotic applications
- Remote internet factory checking
